

Functional networks from multivariate financial times series

Anindya S. Chakrabarti

1 Contents

1. Introduction
 - (a) Topological isomorphisms of human brain and financial market networks, *Front. Syst. Neurosci.*, 15 September 2011 <https://doi.org/10.3389/fnsys.2011.00075>
 - (b) Example of EEG data
2. Properties of asset return series: Inter-day and intra-day
 - (a) Distribution of return
 - (b) Scaling laws (inverse cubic law)
 - (c) Define stationarity and non-stationarity
3. Fractality in stock price data
 - (a) Multi-scaling, Di Matteo, T. (2007). Multi-scaling in finance. *Quantitative finance*, 7(1), 21-36.
 - (b) Multifractal properties of the Indian financial market, S Kumar, N Deo *Physica A: Statistical Mechanics and its Applications* 388 (8), 1593-1602
4. Return correlation network
 - (a) Spectral properties
 - (b) Filtering different modes (sparsistent filtering)
5. Volatility network
 - (a) Volatility estimation: GARCH model
 - (b) Volatility estimation: Diebold-Yilmaz's intra-day technique
 - (c) Volatility correlation network
6. Granger causal network
 - (a) Lagged correlation network
 - (b) Multiple hypothesis testing: Bonferroni's correction
7. Co-integration network
8. Network measures on correlation networks
 - (a) Mapping with principal components and spectral modes
 - (b) Centrality measures
 - (c) Do centralities capture risk? (Billio, M., Getmansky, M., Lo, A. W., and Pelizzon, L. (2012). Econometric measures of connectedness and systemic risk in the finance and insurance sectors. *Journal of Financial Economics*)

9. Filtering on financial networks
 - (a) Minimum spanning tree
 - (b) Aste, Matteo, Mantegna PNAS filter
 - (c) Spectral filtering: Sparsistent filtering
10. Portfolio optimization with networks
 - (a) A network approach to portfolio selection
June 2016 *Journal of Empirical Finance* 38
DOI:10.1016/j.jempfin.2016.06.003
 - (b) Spread of risk across financial markets: better to invest in the peripheries F. Pozzi, T. Di Matteo & T. Aste *Scientific Reports* volume 3, Article number: 1665 (2013)
11. Complexity of interactions
 - (a) Dielbold-Yilmaz methodology
 - (b) S. Kumar, A. Bansal and A. S. Chakrabarti, Ripples on financial networks, *European Journal of Finance*, (2020) 1-22.
 - (c) A. Rai, A. Bansal and A. S. Chakrabarti, Statistical estimation of time-varying complexity in financial networks, *European Physical Journal B*, 92(2019) 1-9.
12. Multi-layered network
 - (a) Stocks and bonds (A. Mishra, P. Srivastava and A. S. Chakrabarti, ‘Too central to fail’ firms in bi-layered financial networks: Linkages in the US corporate bond and stock markets, *Quantitative Finance*, 22 (2022) 943-971)
 - (b) Information and stock price (order imbalance and return networks)
13. Outlook
